Course Descriptions. Applied Regression Analysis for Evaluators. Instructor: Gary T. Henry, PhD Description: Evaluators often face the situation where program outcomes vary across different participants and they want to explain those differences. To understand the contribution of the program to the outcomes, it is often necessary to control for the influence of other factors.

Analytic Approaches " TEI | The Evaluators' Institute

The output from the logistic regression analysis gives a p-value of p , which is based on the Wald z-score. Rather than the Wald method, the recommended method [citation needed] to calculate the p-value for logistic regression is the likelihood-ratio test (LRT), which for this data gives p . Discussion. Logistic regression can be binomial, ordinal or multinomial.

The term parameter estimation refers to the process of using sample data (in reliability engineering, usually times-to-failure or success data) to estimate the parameters of the selected distribution. Several parameter estimation methods are available. This section presents an overview of the available methods used in life data analysis.
