Harmonic analysis is a branch of mathematics concerned with the representation of functions or signals as the superposition of basic waves, and the study of and generalization of the notions of Fourier series and Fourier transforms (i.e. an extended form of Fourier analysis). In the past two centuries, it has become a vast subject with applications in areas as diverse as number theory ...

We consider a random variable  $x$  and a data set  $S = \{x_1, x_2, \dots, x_n\}$  of size  $n$  which contains possible values of  $x$ . The data set can represent either the population being studied or a sample drawn from the population. Looking at  $S$  as representing a distribution, the skewness of  $S$  is a measure of symmetry while kurtosis is a measure of peakedness of the data in  $S$ .
