At the moment, a number of NGS platforms are available. The most important properties of several NGS platforms, such as output and fragment length, are presented in Table 1 (Bertelli and Greub, 2013, Dark, 2013, Junemann et al., 2013, Loman et al., 2012). The different NGS platforms use different sequencing technologies.

### **Recommendations for Preventing the Spread of Vancomycin**

The branches of microbiology can be classified into pure and applied sciences, or divided according to taxonomy, as is the case with bacteriology, mycology, protozoology, and phycology. There is considerable overlap between the specific branches of microbiology with each other and with other disciplines, and certain aspects of these branches can extend beyond the traditional scope of microbiology

Lyme disease, or borreliosis, is caused by spirochetal bacteria from the genus *Borrelia*, which has 52 known species. Three main species (*Borrelia garinii*, *Borrelia afzelii*, and *Borrelia burgdorferi* s.s.) are the main causative agents of the disease in humans, while a number of others have been implicated as possibly pathogenic. *Borrelia* species in the species complex known to cause Lyme disease ...

Microscopic Morphology; Hyphae are septate with smooth walled conidiophores (usually less than 300 Åm in length and 5-10 Åm wide). Vesicles are subclavate in shape, roughly 20-30 Åm in width.

Conidiogenous cells (phialides) are flask shaped, uniseriate, compact (closely spaced), usually forming on the upper two-thirds of the vesicle and mature parallel to the axis of the conidiophore ...
