4! Ten Simple Rules, D. P. Bertsekas! WHAT IS DIFFERENT ABOUT MATH WRITING?!
• Math writing blends two languages (natural and math)!
• Natural language is rich and allows for ambiguity!
• Math language is concise and must be unambiguous!
• Math writing requires slow reading!
• Often expresses complex ideas!
• Often must be read and pondered several times!

TEN SIMPLE RULES FOR MATHEMATICAL WRITING

In our everyday lives we use we use language to develop ideas and to communicate them to other people. In this free course, Mathematical language, we examine ways in which language is adapted to express mathematical ideas.

Mathematical economics is the application of mathematical methods to represent theories and analyze problems in economics. By convention, these applied methods are beyond simple geometry, such as differential and integral calculus, difference and differential equations, matrix algebra, mathematical programming, and other computational methods. ...

Mathematical logic is a subfield of mathematics exploring the applications of formal logic to mathematics. It bears close connections to metamathematics, the foundations of mathematics, and theoretical computer science. The unifying themes in mathematical logic include the study of the expressive power of formal systems and the deductive power of formal proof systems.

prophecies, please visit the page at this link. This page explores math problems that were assigned to us through prophecy within the traditional historicist context. Let's start with a couple of Daniel's "time, times and an half" problems, and the mathematical probability of prophecy.
